

**Amendments to the Claims**

This listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

1. – 15. (Canceled)

16. (Previously Amended) A method for communicating and formatting an image from an image capture device, comprising:

initiating a wireless connection between an image capture device and an image storage device;

querying the image storage device for a supported format; and

if the supported format differs from an image format, reformatting the image to the supported format without user intervention and communicating the image from the image capture device to the image storage device.

17. (Canceled)

18. (Previously Amended) The method as described in claim 16, wherein the wireless connection includes at least one of an infrared and radio frequency connection.

19. (Original) The method as described in claim 16, wherein the image capture device includes at least one of a digital camera and digital camcorder and the image storage device includes a removable media device including at least one of a digital versatile disk (DVD), digital video disk-erasable (DVD-e), VCD, and compact disc.

20. (Original) The method as described in claim 16, wherein deciphering includes

decoding the stored image from a first format into a photoframe and encoding the decoded image into a second format.

21. – 24. (Canceled)

25. (Previously Presented) A system for communicating and formatting an image from an image capture device, comprising:

an image capture device for capturing the image; and

an image storage device for storing the image to removable media,

wherein the image capture device initiates a wireless connection between an image capture device and an image storage device; queries the image storage device for a supported format; deciphers the image to the supported format if the supported format differs from the image format, and communicates the image to the image storage device for storage to the removable media.

26. (Previously Presented) The system as described in claim 25, wherein the wireless connection includes at least one of a infrared and radio frequency connection.

27. (Previously Presented) The system as described in claim 25, wherein the image capture device includes at least one of a digital camera and digital camcorder and the image storage device includes a removable media device including at least one of a digital versatile disk (DVD), digital video disk-erasable (DVD-e), VCD, and compact disc.

28. (Previously Presented) The method as described in claim 25, wherein deciphering includes decoding the stored image from a first format into a photoframe and encoding the decoded image into a second format.
